IN THE CLAIMS:

Please revise the claims to read as follows:

1. (Currently amended) A method of processing search results obtained in response to a user

query, the method comprising:

providing document pointers returned by a search engine to identify a source from which

documents are available, each said document pointer including a Uniform Resource Locator

(URL) displayed as part of a search result by said search engine;

generating at least two visual abstracts for at least one of said documents, each of said

two visual abstracts being a thumbnail image of a different size, said visual abstracts being

generated after first manipulating said document so as to enhance a visibility of at least a portion

of said document, said manipulating being performed by filtering said document and

formatting a stream of data such that when said data is displayed on a display screen

regarding said at least one of said documents, a smaller one of said visual abstracts appears

adjacent to a corresponding search result.

2-3. (Canceled)

4. (Currently amended) The method of claim 3 1, wherein said filtering is performed on an

image in said document.

5. (Previously presented) The method of claim 1, further comprising:

S/N: 09/442,150

Docket: ALM9990095

2

displaying a larger one of said visual abstracts on said display screen when requested by

said user.

6. (Previously presented) The method of claim 5, further comprising:

storing data relating to said larger one of said visual abstracts.

7. (Original Claim) The method of claim 5, wherein said larger one of said visual abstracts is

displayed on said display screen when a cursor is moved over said smaller one of said visual

abstracts.

8. (Previously presented) The method of claim 7, further comprising:

removing said larger one of said visual abstracts from said display screen.

9. (Original Claim) The method of claim 8, wherein said larger one of said visual abstracts is

removed from said display screen when said cursor is moved away from said smaller one of said

visual abstracts.

10. (Canceled)

11. (Currently amended) A method of processing search results obtained in response to a user

query, the method comprising:

examining document pointers returned by a search engine to identify a source from which

documents are available, each said document pointer including a Uniform Resource Locator

(URL);

obtaining said documents from said source;

generating a visual abstract for each of said documents, each visual abstract being a

thumbnail image, each said thumbnail image comprising a visual similarity of said document as

reduced in size, a title of said document ensured to be readable on each said thumbnail image;

formatting a stream of data such that when said data is displayed on a display screen, each visual

abstract appears adjacent to a corresponding search result; and

creating a larger visual abstract of at least one of said documents;

displaying said larger one of said visual abstracts on said display screen on demand and

removing said larger one of said visual abstracts from said display screen.

12. (Previously presented) The method of claim 11, further comprising:

storing data relating to said larger one of said visual abstracts.

13. (Canceled)

14. (Currently amended) The method of claim 13 11, wherein said larger one of said visual

abstracts is displayed on said display screen when a cursor is moved over said smaller one of said

visual abstracts.

15. (Canceled)

16. (Currently amended) The method of claim 15 11, wherein said larger one of said visual

abstracts is removed from said display screen when said cursor is moved away from said smaller

one of said visual abstracts.

07/19/2006 10:36 FAX 7037612375

17. (Previously presented) A method of processing search results obtained in response to a user

query, the method comprising:

examining document pointers returned by a search engine to identify sources from

which documents are available, each said document pointer including a Uniform Resource

Locator (URL);

obtaining said documents from said sources;

generating a visual abstract for each of said documents, each visual abstract being a

thumbnail image, each said thumbnail image comprising a visual similarity of said document as

reduced in size, a title of said document ensured to be readable on each said thumbnail image;

formatting a stream of data such that when said data is displayed on a display screen, each

visual abstract appears adjacent to a corresponding search result;

determining whether a portion of a source document should be enhanced for visibility

relative to another portion; and

manipulating said source document determined to have a portion to be enhanced so that

one portion therein is manipulated to improve a visibility while another portion therein is

2 007/012

manipulated to degrade a visibility, wherein said manipulating includes filtering said source

document.

18. (Original Claim) The method of claim 17, wherein said filtering is performed on an image

in said source document.

19. (Previously presented) The method of claim 17, wherein said portion of said source

document to be enhanced corresponds to at least one of a title and a heading of said source

document.

20. (Previously presented) The method of claim 19, wherein one of said title and said heading is

enlarged as compared with a second portion of said source document.

21. (Previously presented) The method of claim 20, wherein said second portion of said source

document corresponds to a body of text of said source document.

22. (Currently amended) A method of searching for a document, said method comprising:

supplying a search request;

providing abstracts of documents on a screen display that correspond to said search

request, said abstracts including a written abstract that contains a summary of a contents of said

documents and a first visual abstract of each of said documents;

creating a second visual abstract of one of said documents, each of said first visual abstract and said second visual abstract respectively being a thumbnail image of said document,

wherein said second visual abstract is larger than said first visual abstract; and

displaying said second visual abstract when requested by a user, said second visual abstract being displayed on said display screen when said user moves a pointing device over a

corresponding one of said first visual abstracts; and

removing said second visual abstract from said display screen when said user moves said

pointing device away from said corresponding one of said first visual abstracts.

23. (Previously presented) The method of claim 22, wherein said first visual abstract is created

after manipulating a source document so as to enhance visibility of at least a first portion of said

source document.

24. (Previously presented) The method of claim 23, wherein said first portion corresponds to at

least one of a title and a heading of said document.

25-26. (Canceled)

27. (Previously presented) The method of claim 22, further comprising:

storing data relating to said second visual abstract in a cache database.

28. (Previously presented) The method of claim 27, further comprising:

deleting said data relating to said second visual abstract in said cache database after a

predetermined amount of time.

29. (Currently amended) A program storage device readable by machine, tangibly embodying a

program of instructions executable by said machine to perform method steps for processing

search results obtained in response to a user query, said method comprising:

supplying a search request;

providing abstracts of documents on a screen display that correspond to said search

request, said abstracts including a written abstract containing a summary of a contents of said

documents and a first visual abstract of said documents;

creating a second visual abstract of one of said documents, each of said first visual

abstract and said second visual abstract respectively being a thumbnail image of said document,

wherein said second visual abstract is larger than said first visual abstract; and

displaying said second visual abstract when requested by a user, said second visual

abstract being displayed on said display screen when said user moves a pointing device over a

corresponding one of said first visual abstracts; and

removing said second visual abstract from said display screen when said user moves said

pointing device away from said corresponding one of said first visual abstracts.

30. (Currently amended) A computer system for searching for a document, said system

comprising:

Docket: ALM9990095

8

MCGINN IP LAW Ø 010/012

a client system; and

a server system,

07/19/2006 10:37 FAX 7037612375

said client system supplying a search request to said server system, said server system

providing abstracts of documents to said client system, said abstracts corresponding to said

search request, said client system displaying said abstracts on a screen display, said abstracts

including a written abstract of a contents of said documents and a first visual abstract of each of

said documents, said server system creating a second visual abstract of one of said documents.

each of said first visual abstract and said second visual abstract respectively being a thumbnail

image of said document, said second visual abstract being larger than said first visual abstract

when displayed on said screen display, said client system displaying said second visual abstract

when requested by a user, said second visual abstract being displayed on said screen display

when said user moves a pointing device over said first visual abstract, said second visual abstract

being removed from said screen display when said user moves said pointing device away from

said first visual abstract of said document.

31. (Previously presented) The system of claim 30, wherein said first visual abstract is created

after manipulating a source document so as to enhance visibility of at least a first portion of said

source document.
